

# MCNAB *Sport* IMANTS Shockwave

## The problem

Soil compaction on grass based sports playing areas is a major problem for sports facilities.

## The solution

The Imants Shockwave is a linear de-compactor, designed to revitalise heavy wear areas by relieving soil compaction, improving aeration and removing surface water.

## How it works

Soil is displaced by the Shockwave's blades and as the machine moves forwards, this movement creates a wave action, shattering the soil laterally and de-compacting from the surface down to the full working depth.

Available for hire with operator.
